6. Problem Statement: Scholarship Eligibility Assessment

A university uses an AI assistant to evaluate scholarship applications based on a student's academic score and annual family income. Design a prompt that determines eligibility using predefined criteria.

Eligibility Criteria:

- Academic score must be at least 85%.
- Annual family income must not exceed ₹3,00,000.
- Both conditions must be satisfied to qualify.

Input and Expected Output:

Input	**Expected Output**
Score: 90%, Income: ₹2,50,000	ELIGIBLE
Score: 80%, Income: ₹2,00,000	NOT_ELIGIBLE
Score: 95%, Income: ₹4,00,000	NOT_ELIGIBLE
Score: 90%, Income: ₹2,00,000	ELIGIBLE
Score: 90%, Income not provided	INSUFFICIENT_DATA
Score not provided, Income: ₹2,00,000	INSUFFICIENT_DATA
Score and income not provided	INSUFFICIENT_DATA

Constraints:

1. Apply only the specified eligibility criteria.
2. Never assume missing values.
3. If either required value is missing, return INSUFFICIENT_DATA.
4. Return exactly one label: ELIGIBLE, NOT_ELIGIBLE, or INSUFFICIENT_DATA.
